

Question 1 | Correct Mark 1.00 out of 1.00**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2  int main(){
3      int n;
4      scanf("%d",&n);
5      int arr[n];
6      for(int i=0;i<n;i++){
7          scanf("%d",&arr[i]);
8      }
9      int x;
10     scanf("%d",&x);
11     int found=0;
12     for(int i=0;i<n;i++){
13         for(int j=1;j<n;j++){
14             if(arr[i]+arr[j]==x){
15                 printf("%d\n",arr[i]);
16                 printf("%d",arr[j]);
17                 found=1;
18                 return 0;
19             }
20         }
21     }
22     if(found==0){
23         printf("No");
24     }
25 }
26

```

	Input	Expected	Got
