

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("");
                printf("");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  int main(){
3      int n;
4      scanf("%d",&n);
5      int count=0;
6      count++;
7      if(n==1){
8          count++;
9      }
10     }
11     else{
12         count++;
13         for(int i=1;i<=n;i++){
14             count++;
15             count++;
16             for(int j=1;j<=n;j++){
17                 count++;
18                 count++;
19                 count++;
20                 break;
21                 count++;
22             }
23         }
24     }
25     printf("%d",count);
26     return 0;
27 }
```
